Elena Revicheva

AI-native systems operator, product builder and executive leader.

I design the system, direct AI-assisted implementation, ship it, operate it — and own the outcome.

Production services	15+
CRM records my agents wrote	3,000+
AI film-making machinery	9 films
Years as Deputy CEO & CLO	7

The operating model

Not a candidate plus tools. One AI-native operating unit.

ER

Elena Revicheva

Principal: the human backing every decision

What should exist, how it must behave, and whether it actually worked.

Requirements · Architecture · Orchestration · Evaluation · Deployment · Monitoring · Production decisions

+

AI

AI Personal Assistants (AIPAs)

Execute at scale

Implementation code, research, drafting, media generation and scheduled operations.

Claude Code · Cursor · Specialised agents · 5-provider LLM fallback · 15+ services · 25+ scheduled jobs

=

E+A

Human-backed AI unit

Ships and stays accountable

Live in production · One named owner

From an ambiguous problem to a deployed, measurable result — with one named owner who answers for it in production.

Note · How I work — Elena Revicheva · Oct 1, 2026

I operate an AI-native development environment where specialized agents handle much of the implementation execution. I own requirements, architecture, orchestration, evaluation, deployment, monitoring and production decisions.

The distinction

I don’t sell unaided typing speed.

I own the decisions that determine what gets built, what ships, how it behaves — and what happens when it fails.

What I actually do

I turn ambiguous business and creative problems into working AI-native systems.

DEFINE 01	MAP 02	CHOOSE 03	DIRECT 04	EVALUATE 05	OPERATE 06
The outcome	**The workflow**	**The parts**	**The build**	**The proof**	**The run**
The problem and the **measurable result** it must move.	Handoffs, controls and **failure points.**	Models, APIs, tools, data — and where **a human must approve.**	Implementation through AI coding agents: **Claude Code, Cursor.**	Test behaviour, score outputs, **reject changes that make it worse.**	Deploy, monitor, diagnose, **iterate from production evidence.**

My development model

Technical direction + Architecture + AI-assisted implementation + Production ownership

Where I create the most value

Three lanes. One pattern underneath.

Lane 01

AI Operations

- Workflow discovery & automation
- Agent orchestration
- CRM & pipeline operations
- Monitoring & feedback loops

Proof in production

3,000+

records my agents wrote into HubSpot: 1,800+ job leads from my own job search and 800+ business prospects — research, qualify, draft, one human tap, send.

Lane 02

AI Product & Transformation

- Prototype the experience
- Connect systems & deploy
- Organise operations around it
- Improve from evidence

Proof in production

39 audits

of 18 websites by my AI Visibility Audit API ↗ in 1–10 October alone — 18 run by people on the public page. Anyone enters a website, no login, and gets 34 checks on how ChatGPT, Perplexity and Claude see it.

Lane 03

Creative AI Systems

- Concept, narrative & world-building
- Image · video · audio orchestration
- Production pipelines
- Published experiences

Proof in production

9 films

published from my ATUONA universe — 99 multidisciplinary art fragments in Russian and English, made end to end by my own pipeline.

The through-line: I design intelligent systems and the experience around them — from the agents that run a business to the films they make.

Evidence

I operate systems, not slides.

Job postings screened
My job-search agent · human decision gates

11,000+

Learns hourly from the decisions I record in the CRM.

Discovery & qualification

CRM records written by agents
HubSpot · source attribution

3,000+

1,800+ job leads from my job search, 800+ business prospects. A send is refused if an attachment fails to load.

AI operations · CRM automation

AI-visibility audits
Public API · GEO / AEO

39 audits

Of 18 websites in 1–10 October (server logs); 18 run by people on the public page, 21 by my outreach agents. 34 checks each.

GEO · AEO · Tech SEO

AI film-making machinery
ATUONA AI Film Studio

9 films

Crimson Escape: 3:36, 16 generated shots, mixed to streaming loudness (–16 LUFS).

Creative AI production

Automated tests
Unit · integration · golden set

600+

Unit, integration and golden-set tests, plus a 5-provider LLM fallback chain.

Reliability & evaluation

Executive foundation
Deputy CEO & Chief Legal Officer

7 yrs

Regional e-government operator: I ran the board process and the legal side of moving public services online.

Leadership

All figures are floors from production logs and the live CRM API, re-counted 11 October 2026.

Ownership under failure

What I do when it breaks — and what it’s called.

Silent failure

An integration that never said it was broken

Found — Trial sign-ups had never reached the CRM since launch, while the sender’s log looked healthy.

Did — **Audited from the receiving end, root-caused, fixed, backfilled all 28 lost users.**

Vacuous guard

A spending cap that could never fire

Found — The budget guard read a price field the vendor never sends, so every price passed.

Did — **Fixed it against the vendor’s real response and published the postmortem.**

Evaluation gate

The more complex model lost

Found — A RAG upgrade to my screening judge scored lower on an evaluation set built from my real decisions.

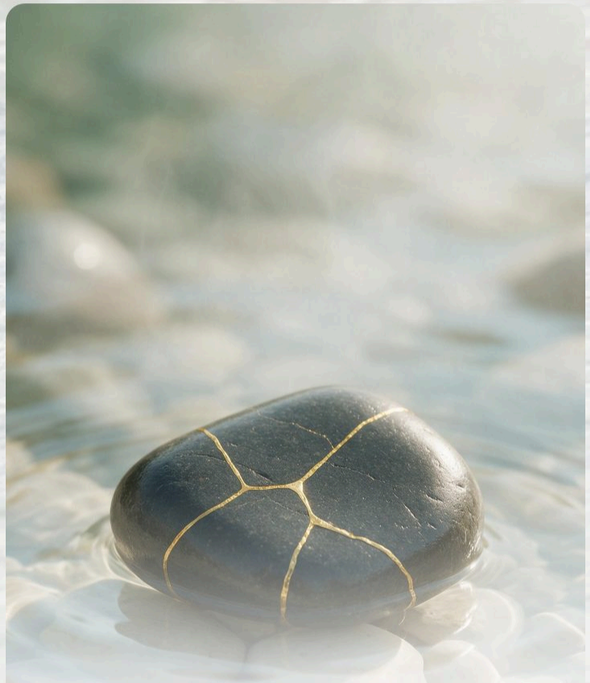

Did — **Shipped it switched off. Accuracy beats sophistication.**

Graceful degradation

A provider retired its models. Nothing went down.

Found — A vendor deprecated the models my agents used.

Did — **The five-provider chain kept the bots answering. One pipeline still lost three good jobs for two days, until I routed it through the chain.**

Kintsugi, not cover-ups

The repair stays visible. Postmortems with named failure modes are published openly.

Where I fit

The roles I'm built for.

AI operations & implementation 6

- AI Operations Lead
- AI Implementation Lead
- AI Automation Lead
- AI Workflow Architect
- AI Systems Operator
- Agentic Workflow Designer

AI product & transformation 6

- AI Product & Automation Lead
- AI Transformation Lead
- AI Innovation Lead
- AI Adoption Lead
- Generative AI Product Lead
- AI Prototyping Lead

Creative technology 5

- Creative Technologist — GenAI
- Generative AI Producer
- Creative AI Pipeline Builder
- GenAI Production Lead
- AI Innovation Producer

Good fit Business problem → Process → System design → AI & tools → Implementation → Deployment → People → Metrics → Iteration

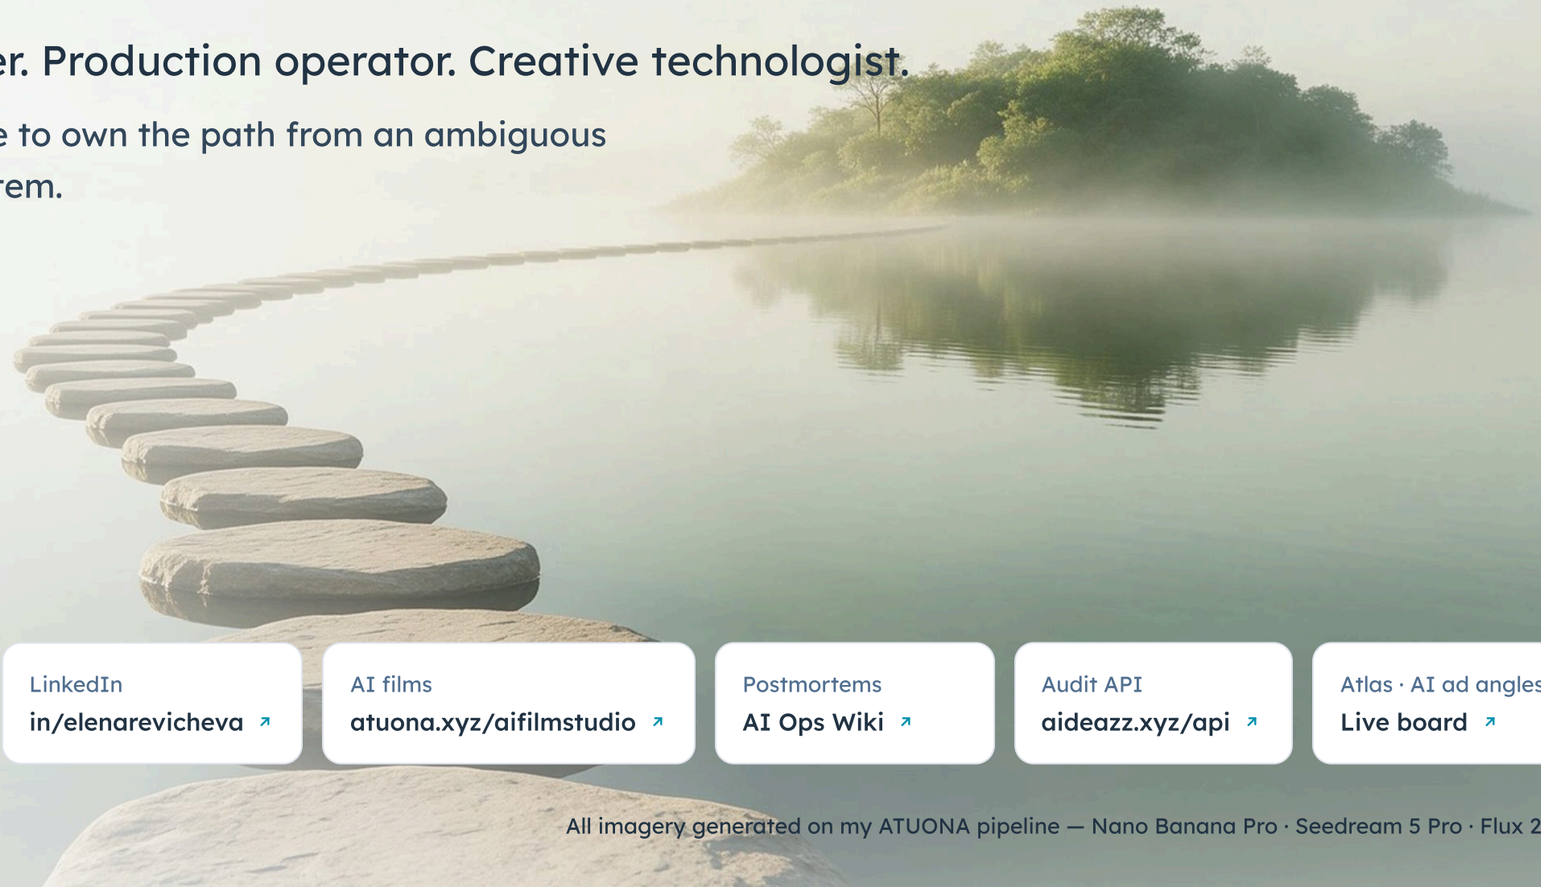

Not my fit Roles judged mainly on hand-written code or live-coding drills. Instead, I'll walk you through a live system I run.

Fully remote · Panama · UTC–5 · overlaps US Eastern & Central · LATAM-friendly teams · English · Russian

AI-native systems ownership.

Former executive. Hands-on builder. Production operator. Creative technologist.

I’m looking for a team that wants someone to own the path from an ambiguous problem to a deployed, measurable AI system.
